Global Innovator & Leader in Data Loss Prevention (DLP) Solutions

Zecurion has successfully developed and implemented DLP providing proven and reliable protection against leaks for thousands of companies around the world. Started in 2002, the company was one of the first to bring to the market highly sensitive, robust products enabling organizations to manage the risk of employees accidentally or intentionally sharing confidential information.

In addition to DLP solutions, Zecurion is expert in cryptography, and a leading provider of encryption to protect data during storage and transfer. Its product suite and integrated platform is easy to deploy – simple administration set up and policy selection – and easy to manage – with an intuitive console that can easily be customized. Zecurion is continually developing solutions including those addressing risk of leaks through social and mobile applications.

Integrated Platform Solutions

Zecurion DLP combines Zgate to control all network traffic, Zlock to control peripheral devices, Zdiscovery to detect policy violations store confidential documents and Zecurion Zserver storage encryption servers and tapes.

Ten Years of Growth

2012

Zecurion released Zdiscovery, designed to search for confidential information traveling over networks and archived in storage

2010 & 2011

Enhanced its analytical capabilities for greater interrogation in real time

2009

Integrated and further developed its product line into a solution suite including greater interoperability with other security software and systems, including social networks and mobile web sessions

2008

Launched Zgate monitoring HTTP, SMTP and other network traffic

2006

Expanded its market presence by opening additional offices in the U.S., Europe and the CIS

2005

Released the first version Zlock (for peripheral devices)

2002

Released the first version of Zserver

2001

Founded in Moscow by three engineers, among them current CEO Alexey Raevsky
