

Zdiscovery

PRODUCT OVERVIEW

Zecurion Zdiscovery scans all stored data in real time across corporate networks and databases. It reveals inappropriately stored confidential information and determines violations of security policies. Since it was first released in 2012, Zdiscovery has attracted more than 100,000 users.

Zdiscovery is designed to detect sensitive, inappropriately stored information in network folders, cloud storage, distributed databases, and document management systems including Oracle Database, Microsoft SQL Server, and IBM DB2.

To detect sensitive information, Zdiscovery uses hybrid analysis that can accurately determine the category of information and decide if it is stored in the proper place, based on corporate policy. Hybrid analysis improves the detection of confidential information by up to 95%, compared with systems using less sophisticated detection technologies. Zdiscovery has a server module that allows remote scanning to be scheduled without the need to install a local agent on computers or servers.

Zecurion Zdiscovery allows administrators to assign various actions to be performed upon detection of violations of security policies. The data itself can be removed or transferred to special storage, and information about the violation can immediately be sent to the administrator and to the user who is responsible for improper storage. All events, including a list of the violations, are stored in a log for analysis.

The Zecurion DLP Difference

Zecurion's data loss prevention (DLP) solution is an easy-to-use system for securing confidential data at rest, in motion, at the endpoint, on a network or in the cloud, and to demonstrate regulatory compliance. With pricing and configurations that are SMB as well as large-enterprise friendly, Zecurion's DLP is quick and easy to integrate into the existing IT infrastructure without any complexity. The solution supports network, endpoint, and agent-based discovery functions. Zecurion is continuously developing solutions including those addressing risk of leaks through social and mobile applications.

- *Prevents violations of security policies by scanning data in folders, servers, cloud, databases, and document management systems*
- *Allows remote scanning of data*
- *Uses a hybrid and morphological analysis approach to scan data, as well as graphics, in conventional files*

Minimum System Requirements

All components can be deployed on virtual machines.

Agent Zecurion Zdiscovery:

- Pentium 4 processor or higher;
- 1 GB RAM or higher;
- Microsoft Windows XP SP3/2003 SP2/Vista SP1/2008/7.

Server configurations:

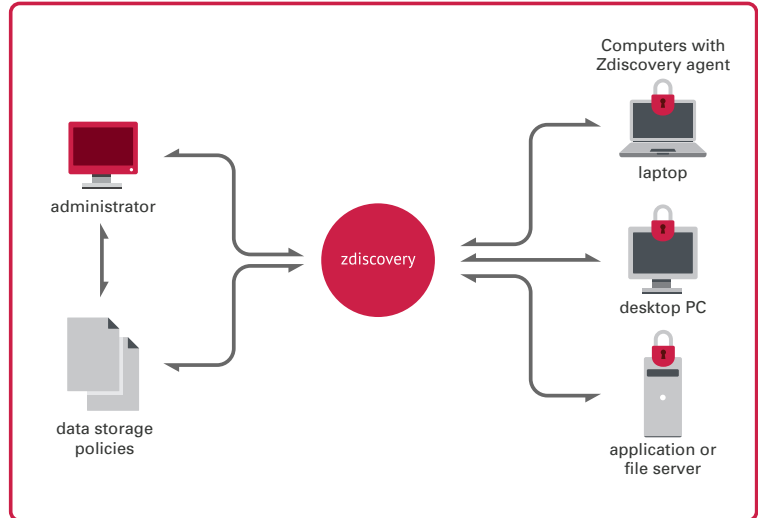

- Pentium 4 processor or higher;
- 1 GB RAM or higher;
- Microsoft XP SP3/2003 SP2/Vista SP1/2008/7;
- DBMS Microsoft SQL Server 2005, 2008 or Oracle Database 10g Release 2 (10.2).

Server logs:

- Pentium 4 processor or higher;
- 1 GB RAM or higher;
- Microsoft XP SP3/2003 SP2/Vista SP1/2008/7;
- DBMS Microsoft SQL Server 2005, 2008 or Oracle Database 10g Release 2 (10.2).

Management Console:

- Pentium 4 processor or higher;
- 1 GB RAM or higher;
- Microsoft Windows XP SP3/2003 SP2/Vista SP1/2008/7.

Zdiscovery* is a part of the ZECURION DLP SYSTEM

*Its latest version, 3.0, was released in 2014 and has enhanced capabilities.

Zlock

Enables the full control and monitoring of all USB ports, removable media, and peripheral devices at endpoints.

Zgate

Zgate is the most comprehensive Data Loss Prevention (DLP) product available, enabling companies to monitor all forms of outbound network traffic and online communications, identifying sensitive information and preventing it from leaving the network.

Zserver

Software based backup and server storage security solution that offers transparent encryption to protect your data.

About Zecurion

Zecurion is a global innovator and leader in security solutions that reduce risk by addressing internal threats. Founded in 2001, Zecurion has successfully developed and implemented security solutions providing proven and reliable protection against leaks for more than 10,000 companies around the world. The company's solutions provide comprehensive protection against the leakage of information throughout the course of its lifecycle – from creation and recording to archiving and deletion. In 2013, Zecurion was included in the Magic Quadrant for Content-Aware Data Loss Prevention by Gartner. It has also received recognition through the prestigious Golden Bridge Awards and Network Products Guide, and it is consistently ranked highest among developers of DLP Analytics by CNews.
